Adande is pleased to announce today the expansion of its range for 2021 with a new model Saladette. The saladette is a double drawer Adande unit with integrated saladette server.

The saladette unit has been remodelled for 2021 following feedback from Adande customers across the hospitality sector. The new saladette design has been reconfigured to hold more produce, increase operating efficiency, and improve hygiene.

The base is a side-engine two-drawer Adande fridge, with the top drawer integrated to the saladette, enabling the operator to hold make-up produce in readiness. The saladette can be switched off when not in use, and the refrigerated drawer will still operate as normal. The bottom drawer is a standard Adande fridge/freezer drawer, giving further capability for busy venues.

Spanning the full width of the refrigerated drawers, the new saladette server has 20% more holding capacity than earlier Adande models. As a result, it can accommodate an additional 1/3 gastronorm pan.

With a new look for 2021, the server shape has also been updated, with a front-facing slope that is angled towards the operator to give easier and quicker access to produce. This key feature will be invaluable for outlets where time is of the essence such as takeaways, and dark kitchens, as well as busy hotels and restaurants. Attention has also been paid to the aesthetics of the unit, with its appearance enhanced to improve prep area presentation when kitchens are in customer view.

In keeping with Adande's green credentials, the new saladette model uses a natural refrigerant, with zero CO<sub>2</sub> emissions. It is also very efficient and uses less energy than other saladettes on the market.

With a focus on kitchen hygiene, the new server front is made of a single piece of high-grade stainless steel built into the plating up area, removing any potential for dirt-traps and allowing easy cleaning.

Global Sales Director, Karl Hodgson: "We are happy to launch today the new saladette model. Not only does it look fantastic and will be a great addition to any kitchen where food prep is on view, it performs excellently, the server holding more

produce, delivering efficiency in the speed of serve, all whilst using less energy and without contributing to CO<sub>2</sub> levels. It's hygienic and can be controlled independently to the drawers below, meaning when it is empty you can simply switch it off, again saving energy usage. We would like to thank our customers whom we consulted with on the new design for their time and input. "

The 2021 new saladette model is available to order now.

ENDS

#### NOTES TO EDITORS:

Adande is an award-winning UK manufacturer of refrigeration equipment. Adande is known for its innovative design that ensures optimum quality and freshness of any produce cooled, frozen or preserved by Adande. From the patented design of its iconic drawers, to its newly launched retail chiller featuring Aircell technology, Adande is globally known as the professional product of choice trusted by discerning chefs and retailers.
