THE HEART OF A SYSTEM

TO LOWER COSTS AND IMPROVE OUTCOMES

 **G SERIES**
40 | 60 | 80

Pound for pound, you won't find a more sustainable dry cleaning system than GreenEarth's G SERIES. If you're using a traditional* cleaning method, you can expect:

- 54% less steam demand
- 64% less electrical consumption
- 70% less water required
- no permits, no regulations

* compared to perc, double-bath distillation

G SERIES ADVANTAGES

Built for you | The G SERIES saves you money by eliminating the additional valves, filters, and special components required by other solvents for safety, regulatory and/or odor issues.

Easy to operate | Our proprietary programs are preloaded. From standard wash cycles to households to ultra-delicate couture items - anything you need. Our spin-disc filter is pre-coated with Activated Clay that removes impurities which other solvents require distillation to remove. Maintenance is also simple, and less time consuming than other processes.

Next-generation technology | We pay attention to the details. A fluid heater raises the temperature of the GreenEarth, reducing dry times and enhancing cleaning. We specified round base tanks so they are easier to clean and less likely to trap lint. The Uni-Jet Spray allows you to combine gentle cleaning with high-pressure pre-treatment. I-Connect, which allows our tech team to access your machine via the internet, reduces down time and keeps your machine updated with the latest programs. To top off the package, an attractive full-color machine wrap and LED door light will highlight the uniqueness of your investment.

Better outcomes | GreenEarth cleans as well as traditional solvents yet isn't aggressive on fabrics, and has no odor. Your customers will be able to see, feel and smell the difference in their clothes. Colors don't fade. Delicate beads, sequins & trims don't "melt." Fabric finishes stay smooth. Natural oils aren't stripped away.
